Aggregated Risks	
<ul style="list-style-type: none"> • Risk Appetite usage is \$3.69bn (down \$78mm on week) • VaR usage is \$128mm (down \$6mm on week) • Decreases driven by equity gamma which went from short \$126mm to long \$306mm, offsetting a small increase in long equity delta • Firm long equity delta is \$2.83bn (up \$0.37bn WoW; excludes event driven trades of \$0.85bn); potential loss of \$166mm if all markets down 5% (vs. \$159mm on 05/07) 	<ul style="list-style-type: none"> • Loan Pipeline exposure: HY: \$6.8bn (flat WoW, dn \$7.6bn on 1Q08), HG: \$8.4bn (up \$0.1bn WoW, dn \$5.5bn on 1Q08) • HY: Syndication: \$6.0bn (\$4.4bn funded), Contingent: \$0.8bn • HG: Syndication: \$7.1bn (\$4.1bn funded), Contingent: \$1.3bn • Long credit spread exposure: \$775mm potential loss for a 10% widening of spreads relative to current levels (vs. \$777mm last week) • Counterparty Risk: IG CCE : \$53.9bn (down \$1.2bn), NIG CCE: \$4.3bn (up \$0.3bn)

Fund Derivative Business Overview (Handout)

[REDACTED] Update

- Lehman holds \$310mm (\$243mm MV) of loans issued in connection with [REDACTED] acquisition of [REDACTED] directory business [REDACTED]. [REDACTED] is a portfolio company of [REDACTED]
- Original intention was to finance the acquisition by issuing [REDACTED] notes. Securitization did not occur at the acquisition's December 2007 closing due to market dislocation. Lehman funded the acquisition with term loans, intending to take out the loans once the [REDACTED] notes were ultimately issued
- In connection with the acquisition, Lehman executed a deal-contingent interest rate swap with [REDACTED]. The swap provides for mandatory cash settlement on 5/30/08 predicated on: (i) closing of the acquisition (occurred on 12/4/07) and (ii) completion of a [REDACTED] (pending)
- On 5/8/08, pursuant to our rights under the financing commitment papers, Lehman delivered to [REDACTED] and [REDACTED] a demand for a [REDACTED] to be completed no later than 5/30/08. However, it is uncertain the securitization will be completed by 5/30/08 if [REDACTED] fails to cooperate. Even if the notes are created by 5/30/08, we may need to continue to hold them on balance sheet since market demand is still uncertain
- [REDACTED] owes Lehman \$25mm on the swap, but [REDACTED] has indicated that cash settling the swap would require a capital injection by [REDACTED] potentially impairing the tax-free nature of the recent merger transaction. Negotiations with [REDACTED] are ongoing and include capitalizing the swap's mtm value into the form of a loan
- Besides the [REDACTED] loan exposure, Lehman also owns an additional \$270mm of loans to four other [REDACTED] entities
- [REDACTED] is the [REDACTED] in the US

- S&P downgraded [REDACTED] to [REDACTED], triggering a requirement that [REDACTED] pay 5% initial margin to Lehman against outstanding interest rate swap portfolio
- To mitigate the impact of this requirement, [REDACTED] unwound the majority of its swap portfolio with Lehman and delivered \$94mm of additional collateral against the remaining trades
- The MTM on our nearly \$2bn of interest rate swaps is (\$53mm) (i.e. Lehman owes [REDACTED], against which we hold \$60mm of collateral. [REDACTED] and [REDACTED] are zero as a result of the high level of collateralization

- Lehman's [REDACTED] subprime CDO counterparty, [REDACTED] which triggered event of default on [REDACTED] was successfully liquidated last week
- In connection with the liquidation, Lehman received ~\$730mm of cash from liquidation of the CDO's assets ([REDACTED] and a [REDACTED]), with the remainder of our \$1.15bn CCE being settled against Lehman's VFN liability to the CDO and related reserves
- This resulted in a balance sheet reduction of \$1.15bn and represents a decrease of 2.1% of total firm-wide CCE
